NetFormula® Labware.
Simply efficient formulating.

Platform independent R&D-Software
with integrated data support.

NetFormula®

Labware for net assisted formulating

Capacity for new ideas.

NetFormula® Labware makes your laboratory work more efficient. Since, as of now, the search for formulas, substance data sheets and INCIs – in the worst case in dozens of folders – is a thing of the past. NetFormula® Labware disposes of all relevant information pertaining to this, thus ensuring a decisive head start.

Are you in search of a professional basis upon which you can successfully plan, steer and document your daily laboratory workload? The databases for substances, INCIs, formulations, or suppliers that have already been integrated can, in addition, be administrated centrally if the need exists, and can effortlessly be interfaced with the in-house knowledge-base.

For this purpose NetFormula® Labware is based on the well-known Windows-standards and an intuitively designed menu prompt. Minimal familiarization time and high productivity are the logical consequences thereof.

The current stage of development, together with all relevant information, can be accessed at all times. A knowledge head-start that other departments such as Marketing and Sales also benefit from. Thus you save time and money and gain capacities for your actual work:

The development of new ideas.

Securing your project's success.

- workflow based supervision of the formulation orders through a tracking schedule
- concurrent calculation
- integrated reporting to the central information board for hazardous goods (GIZ)
- complaint management

Integrated Quality Assurance.

- handling and controlling of order of measuring
- sample-batch production
- management of quality control plans and certificates
- stability tests and stress test of preservatives

Optimal Data Management.

- extensive management of raw materials including declaration details and specifications of/from producers and suppliers
- multi level search, filter and report functions
- comparison and versioning of formulations
- declaration files with modification service
- compliance calculation according to NaTrue
- INCI-Inventory with automatic update service
- phase oriented manufacturing instructions
- management of hazardous substances
- electronic document management and archive
- contact management with project and task management (optional)
- bidirectional interfaces to ERPs
- multilingual cross linking of various sites

Simple compilation of dossiers.

- printouts of complete EU-Dossiers with preview
- individual report layout
- export into PDF, EXCEL, XML and HTML

Ergonomic user interface.

- traceability of all user actions (audit trail) according to GMP
- cross reference of all data
- user rights based on roles
- user specific management of favorites and session history
- customer specific adaption of field names and dialogues
- arbitrary number of simultaneously open data records

Leading edge technology.

- platform independent JAVA based ECLIPSE-RichClient (for Microsoft® Windows®, other operating systems on request)
- OR-mapper connecting to SQL data bases for high-performance single or multiple user installations
- data server for web based data updates

The foundation for your success.

Directly at the beginning of the processing of a new product, NetFormula® Labware creates both solid and intelligent structures, which gives your entire company a decisive advantage.

A competitive advantage that you should not be without.

Innovation and dynamics, flexibility and globalisation, quality and customer orientation – the factors that distinguish your company, must be supported by your software in a manner that is future-proof and platform independent.

Quick. Transparent. Reliable.

Were we able to gain your interest?

We would be happy to advise you, without obligation. Feel free to contact us!
